Standard Operating Procedure

1 Purpose

The purpose of this SOP is to describe the process of curating the Answer ALS Clinical Data from its raw form (as received from NeuroBANK) into a completed state (i.e., ready to be shared with the public).

2 Scope

This SOP applies to any Answer ALS individual seeking to either curate OR understand the curation process of the Clinical Data from a raw form into the final package.

3 Definitions/Acronyms

None

4 Procedures

4.1 Rename all files to Answer ALS convention.

- Clinical data CSV files are submitted from NeuroBANK with the format "**v_NB_IATI_**<SURVEYNAME>."
- Each file must be renamed to remove the prefix 'v_NB_IATI_' to expose only the survey name.
- Ex: "v_NB_IATI_AALSDXFX.csv" -> "AALSDXFX.csv"

4.2 Individual File Curation (apply the following steps to each file)

1 Re-order columns: Un-curated files are *generally* in order except for the following columns:

- SubjectUID
- Form_Name
- Visit_Name
- Visit_Date

These four columns should be re-located to columns B, C, D, and E in the order they appear above column B being SubjectUID, column C being Form_Name, column D being Visit_Name, and column E being Visit_Date.

2 Creation of Participant_ID column (created in the A column)

A Column header of "Participant_ID" should be in cell A1

B This column can be curated by utilizing the value found in the SubjectUID field with the following format:

"CASE-" + *SubjectUID*

C Ex: A SubjectUID of "NEUxxxxxxxx " (given) would equate to a corresponding value of "CASE-NEUxxxxxxxx " in the Participant_ID column.

3 Replacing null values

A NeuroBANK creates null values in the data CSV files by assigning a period (.) where null values are found, but the curated files should have NO value assigned to the null values – i.e., they are entirely empty.

B This step involves finding and replacing all periods (.) in all files with an empty cell.

C This is a cleaning step.

4 Subjects.csv File – Replace CASE- with CTRL- as needed (conditionally)

A In the subjects file, participants are labeled as ONLY CASE-NEUxxx; however, if the user is in subject group 5 (healthy control), the prefix must change to CTRL-NEUxxxx.
